BHS offers battery handling equipment for operations of all sizes. Industry-focused engineering, high-quality materials, and ergonomic designs give you the exceptional results you need to optimize production while keeping your staff safe. Swap out forklift batteries in minutes to boost productivity with every lift truck in the fleet.

Battery Handling Equipment

BHS also provides custom battery handling equipment to meet any challenge.

We manufacture original equipment at our 138,000-square-foot manufacturing facility, and we are happy to take special requests. Contact BHS at bhs@bhs1.com to learn about more fully customized solutions for the battery room.

About BHS

The history of BHS, Inc. is one of innovation. In 1979, founder William M. Huber turned an idea into a company by providing more effective and efficient battery handling solutions. Today, BHS is a world-renowned supplier of battery handling systems and warehouse equipment and is the largest manufacturer of battery handling equipment in the world.

BHS offers design, engineering, sales, and support to customers around the globe from our 138,000 ft² (42062 m²) manufacturing facility in St. Louis, Missouri, USA. We are dedicated to integrating superior quality into every component while providing you with the best customer service in the industry.

Instant Up-Front Information

BHS1.com keeps you up-to-date with all of the latest material handling products and industry news. Our online library includes product brochures, parts kits, videos, tech tips, and more. The BHS eStore allows you to review product specifications, options, pricing, and freight estimates while you order.

State-of-the-Art Technology

BHS utilizes the most advanced manufacturing practices and automated processes including state-of-the-art laser technology, CNC machining, and robotic welders to deliver the quality and lead times that the industry demands.

Worldwide Support & 24-Hour Hotline

BHS offers a team of Certified Service and Installation Technicians to assist worldwide. Our 24-Hour Hotline (1.877.BHS.4YOU) provides around-the-clock support and technical assistance outside of regular business hours.

Sales Order Process

The BHS Sales Order Process is a multi-step process starting with an on-site evaluation to obtain the system requirement details based upon your application demands and budget.

Warranty

The BHS commitment to total customer service and support continues after the sale of all BHS products with a 13-month guarantee against defective parts and workmanship. BHS products have a reputation of quality and durability that our customers know to expect.

Mobile Showroom

The BHS Mobile Showroom (MSR) is a traveling showcase of electrical and warehouse equipment and accessories. The MSR allows you to obtain first-hand knowledge of equipment functionality in the comfort of your facility. The MSR is a perfect tool for our Corporate Trainers to run demonstrations all over the continental United States.

Excellent Training Programs

BHS provides multiple outlets for training. The BHS Sales Webinar is a web-based training for dealers to become more familiar with BHS products and services. The BHS Sales Academy is a complimentary 2-day clinic providing expertise in identifying appropriate applications for all BHS solutions.

Custom Equipment

Each manufacturing project is a collaboration between BHS’ team of engineers, designers, and fabrication experts to deliver equipment that meets the specific needs of the client. Application, environment and safety are factors considered in providing your custom equipment.

Floor Inspection

BHS Field Technicians inspect the floors of all Operator Aboard Battery Extractor environments prior to installation in order to address any issues limiting the productivity of your Operator Aboard Battery Extractor System. BHS also offers floor grinding and epoxy when required.

**Operator Aboard Battery Extractors**

Battery Extractors are essential equipment for any facility requiring numerous forklift battery changes and can substantially reduce battery change-out time, ensuring a more productive facility. BHS offers a variety of distinct Operator Aboard Battery Extractors for operations of all sizes. Each forklift battery changer is designed and built for a specific application, yet all units share features that make them the most versatile, reliable, and cost-effective Battery Extractors in the industry.

### Single Side Battery Extractor

The BHS Single Side Battery Extractor (BE-SS) features a heavy-duty structure with various available options to meet specific needs. The BE-SS is fully hydraulic, track-mounted, and floor-driven for added convenience. The vehicle’s control console is located on the rear of the machine for unobstructed operation. The BE-SS also features eight load rollers and an 8” (203 mm) urethane drive wheel.

**FEATURES & BENEFITS**

- Heavy-duty construction for added reliability
- Low-maintenance design reduces preventative maintenance frequency
- No exposed components for added safety
- Durable powder coat finish resists both acid and scratches
- Manual control of hydraulics for easy operation
- Vacuum extraction reduces wear and tear on batteries
- Adjustable vacuum extractor arm for various reach requirements*
- Non-proprietary hydraulic and electrical components lower replacement part costs
- Redesigned hydraulic system for increased flow capacities and consistent function speeds

**Reference Literature PL-1100 for more information.**

### Single Level Battery Extractor

The BHS Single Level Battery Extractor (BE-SL) is the perfect solution for lower capacity applications with a battery fleet containing up to 99 batteries. The BE-SL makes removing and replacing discharged batteries faster and easier than ever. Note: Also available with electric drive.

### Double Stack Battery Extractor

The BHS Double Stack Battery Extractor (BE-DS) is designed for applications with a battery fleet containing up to 149 batteries. As with all BHS Operator Aboard Battery Extractors, the BE-DS is a safe, cost-effective solution to battery handling requirements and saves vital floor space, increasing the capacity of a battery room. Note: Also available with electric drive.

### Triple Stack Battery Extractor

The BHS Triple Stack Battery Extractor (BE-TS) offers a greater opportunity to optimize floor space for valuable warehousing functions. This Battery Extractor is ideal for a battery fleet containing up to 299 batteries. Like all BHS Operator Aboard Battery Extractors, the BE-TS is designed and built to expand as battery handling needs grow. Note: Also available with electric drive.

### Quad Stack Battery Extractor

The BHS Quad Stack Battery Extractor (BE-QS) offers the best solution for large battery changing operations. The BE-QS provides optimum floor savings while providing the latest technological advancements in battery changing equipment. Quad Stack models are designed for fleets containing 300 or more batteries. Note: Also available with electric drive.

**Battery Extractors For Non-Lift Truck Applications**

BHS also provides custom battery extraction solutions for non-lift truck applications. BHS supplies a range of stationary, mobile, and operator aboard solutions for any battery-operated fleet, such as automatic guided vehicles, personnel carriers, and other specialized handling equipment.

*Note: BE-QS is not available on BE-SS.*
Automatic Battery Transfer Carriages

The BHS Automatic Transfer Carriage (ATC) converts an existing pallet truck into an efficient, portable battery changer. The ATC is available in a variety of models with many flexible options to satisfy unique battery handling requirements.

FEATURES & BENEFITS

- Lowers system cost by utilizing existing equipment
- Mounts easily to powered pallet truck—consult BHS for pallet truck specifications
- Powered by the pallet truck battery (12 or 24 V dc available)
- Simple, center-mounted controls for easy operation from left, right, or rear of the carriage
- Standard industrial components utilized in the design, allowing for locally available parts
- Large 2.4” (61 mm) diameter rollers standard
- Ten compartment rollers allow for better wear and load distribution
- Hydraulic-powered push-pull extraction
- Enclosed dashboard sides for added protection against accidental contact with moving parts during operation
- Battery Containment Bar encloses compartment to secure battery during transport
- Rubber Bumpers protect the industrial lift truck fleet during battery change-out
- Spark-proof, poly-sleeved rollers reduce corrosive build-up and extend product life (ATC-24 only)

Reference Literature PL-1500 for more information.

Mobile Battery Extractors

The Mobile Battery Extractor (MBE) is a self-contained extractor that enables battery change-outs anywhere in a facility. The versatile MBE handles a wide variety of applications and is recommended for up to 50 battery changes per day. Note: 16’ (4.88 m) aisle clearance required.

FEATURES & BENEFITS

- 24 V dc powerhead eliminates need for a pallet truck
- Combination of compartment rollers and rear friction strips provides increased battery stability during transport
- Pendant control for ease of operation
- Hydraulic-powered with standard vacuum extraction (magnet extraction optional)
- Operator Shield separates operator from roller compartment
- Large 2.4” (61 mm) diameter rollers standard
- Low-maintenance design reduces operating costs
- Built-in battery and charger for convenience
- Standard industrial components allow for local parts availability
- Heavy-duty construction for added reliability
- Durable powder coat finish resists both acid and scratches
- Battery Containment Bar encloses compartment to secure battery during transport
- Two swivel and two rigid 6” (152 mm) phenolic casters protect floors and provide low rolling resistance
- Spark-proof, poly-sleeved rollers reduce corrosive build-up and extend product life (ATC-24 only)

Reference Literature PL-1400 for more information.

Walkie Transfer Carriages

The BHS Walkie Transfer Carriage (WTC) is a non-powered battery changer designed for smaller battery fleets. The WTC mounts to the user’s existing pallet truck to change batteries in side-extraction applications. The WTC comes in three models and offers a dependable and versatile battery changing system at an affordable cost.

FEATURES & BENEFITS

- Heavy-duty construction for added reliability
- Mounts easily to powered pallet truck—consult BHS for pallet truck specifications
- Simple design made for easy maintenance
- Large 2.4” (61 mm) diameter rollers standard
- Hook and chain extraction
- Hand wheel for positive control of the extractor arm
- Spark-proof, poly-sleeved rollers reduce corrosive build-up and extend product life (WTC-24 only)
- Battery Containment Bar encloses compartment to secure battery during transport
- Rubber Bumpers protect the industrial lift truck fleet during battery change-out
- Extractor Arm Latch automatically locks extractor arm in place when retracted

Reference Literature PL-1600 for more information.
Dual Transfer Carriage

The BHS Dual Transfer Carriage (DTC) converts an existing pallet truck into an efficient, portable battery changer. The DTC is equipped with three 16” (406 mm) wide battery compartments that allow two battery change-outs anywhere in your facility.

**FEATURES & BENEFITS**

- Three 16” (406 mm) wide battery compartments
- Hydraulic-powered with multi-axis extractor arm
- Magnet extraction ideal for use with narrow batteries
- Combination of lead rollers and friction strips provides increased battery stability during transport
- Lowered system cost by utilizing existing equipment
- Mounts easily powered pallet truck with 60” (1524 mm) or longer forks
- Pivoting control for ease of operation
- Dual 58-175 gray connector harness plugs into the pallet truck and battery, powering the DTC and pallet truck simultaneously
- Load and unload batteries to stands on either side of the unit
- Durable powder coat finish resists both acid and scratches
- 6,000 lb (2721 kg) load capacity based on 8,000 lb (3628 kg) host truck

Reference Literature PL-5000 for more information.

Bridge Trolley

The BHS Bridge Trolley (BT) allows for single-person changing operations in lighter battery applications. Coupled with the standard guide track, the BT is easily pushed by hand for smooth and efficient battery change-outs.

**FEATURES & BENEFITS**

- Compact design for areas with limited space
- Rack and pinion bed leveling ensures compartments remain level during battery transfer
- Large 6” (152 mm) phenolic casters protect floors and provide low rolling resistance
- Floor locks prevent unwanted movement of the unit when not in use
- Large 2.4” (61 mm) diameter rollers standard
- Spark-proof, poly-sleeved rollers reduce corrosive build-up and extend product life
- Battery Containment Bars enclose compartments to secure batteries during transport
- Designed for pallet truck and light picker applications that are equipped with roller beds
- Two independently controlled roller compartments
- Angle Guide Track (SST-4) provides alignment and guidance of the trolley (sold separately)
- Steel End Stops (TRK-ES) prevent unit from running off the guide track (sold separately)
- 1,100 lb (499 kg) load capacity per compartment

Reference Literature PL-1800 for more information.

Roller Transfer Carts

The BHS Roller Transfer Cart (RTC) is a simple but heavy-duty battery changing cart that allows staff to quickly change out a forklift battery.

**FEATURES & BENEFITS**

- 5” to 13” (127 mm to 330 mm) roller heights available
- Note: Units with roller heights below 10” (254 mm) use outboard-mounted casters and roller heights 10” (254 mm) up to 11” (279 mm) use 5” (127 mm) casters
- Heavy-duty construction for added reliability
- Floor locks prevent unwanted movement of the unit when not in use
- Two rigid and two swivel 6” (152 mm) phenolic casters protect floors and provide low rolling resistance
- Large 2.4” (61 mm) diameter rollers standard
- Spark-proof, poly-sleeved rollers reduce corrosive build-up and extend product life

Reference Literature PL-1900 for more information.

Traveling Battery Transporters

**FEATURES & BENEFITS**

- Allows for one-person changing operations in most applications
- Removable push bars for added convenience
- Large 2.4” (61 mm) diameter rollers standard with 2,400 lb (1080 kg) load capacity
- Spark-proof, poly-sleeved rollers reduce corrosive build-up and extend product life
- Phenolic casters protect floors and provide low rolling resistance
- Track-mounted design; Single Guidance Track (SST-C3) and Steel End Stops (TRK-ES) are sold separately

Reference Literature PL-1800 for more information.

Hardwood Transfer Carts

**FEATURES & BENEFITS**

- Recycled, polyethylene decking is acid resistant, nonconductive, and environmentally friendly
- Heavy-duty construction for added reliability
- Floor locks prevent unwanted movement of the unit when not in use
- Two rigid and two swivel 6” (152 mm) phenolic casters protect floors and provide low rolling resistance
- 3,000 lb (1360 kg) load capacity

Reference Literature PL-1900 for more information.

Gantry Cranes

Portable Gantry Cranes from BHS provide safe and easy vertical extraction for most standard lift truck batteries. They are significantly more cost-effective than bridge cranes, and their modular design allows for easy system expansion.

Non-Power Drive Gantry Cranes

Change forklift batteries in vertical-extraction fleets with a Non-Power Drive Gantry Crane (PGC) from BHS. These powder-coated, all-steel gantry cranes are available with 2-ton or 3-ton capacities to match virtually any battery fleet.

**FEATURES & BENEFITS**

- Modular design allows for easy system expansion
- A variety of beam spans and capacities are available for specific applications
- 8’ (243 mm) swivel casters are standard to allow for easy mobility of the entire gantry crane
- High 10’ (3 m) under-beam clearance is standard on all units
- Cable Festoon Kit keeps cables secure during operation of manual trolley

Reference Literature PL-2700 for more information.

Power Drive Gantry Cranes

Power Drive Gantry Cranes from BHS are available in 2-ton and 3-ton models and can be tailored to suit overhead battery extraction forklift fleets. These powered gantry cranes provide smooth transitions thanks to variable frequency drive technology, allowing for safe and productive use in various applications.

**FEATURES & BENEFITS**

- The latest variable frequency drive technology provides smooth acceleration/deceleration of the gantry
- Modular design allows for easy system expansion
- A variety of beam spans and capacities are available for specific applications
- High 10’ 5” (3.2 m) under-beam clearance is standard on all units
- Cable Festoon Kit keeps cables secure during operation of motorized trolley
- Multiple wheel and track options are available

Reference Literature PL-2700 for more information.
**Battery & Charger Stands**

Save valuable space while protecting fleet investments with BHS Battery Stands and Charger Stands. Custom designs and a wide range of optional features provide dependable storage for forklift batteries and chargers of every style.

### System Stands

Heavy-duty, steel-constructed System Stands complement an Operator Aboard Battery Extractor. The complete line of System Stands is available in Single Level, Double Stack, Triple Stack and Quad Stack models to accommodate system requirements.

**FEATURES & BENEFITS**

- Spark-proof, poly-sleeved rollers reduce corrosive build-up and extend product life
- Models available in various compartment widths to accommodate batteries from 12” to 48” (305 mm to 1219 mm)
- 49” (1016 mm) standard compartment depth
- Hitch pin-secured roller axles for ease of maintenance
- Rearward-pitched battery slots to assist in battery retention
- Auxiliary backstops for DS, TS, and QS models provide compartment depths from 27.5” to 49” (699 mm to 1245 mm); for DL models: reduce compartment depth to 24” (610 mm)
- Charger connector mounting holes
- Foot pad dimensions for DS, TS, and QS models: 0.75” x 6” x 8” (19 mm x 152 mm x 203 mm); for DL models: 0.25” x 3” x 5” (6 mm x 76 mm x 127 mm)
- Charger cable routing holes help protect cables from damage (DS, TS, & QS models only)
- Charger anchoring slots for securing most makes of chargers
- Auxiliary backstops for DS, TS, and QS models provide compartment depths from 27.5” to 49” (699 mm to 1245 mm); for DL models: reduce compartment depth to 24” (610 mm)
- ± 0.5” (± 13 mm) adjustable legs for added convenience
- Six rollers per compartment

Reference Literature PL-2000 for more information.

### Battery Roller Stands

The BHS Battery Roller Stands (BS) provide convenient storage for industrial lift truck batteries. Constructed with heavy-duty steel, the BS is available in various widths and compartment sizes to meet specific requirements. Note: Roller height required when ordering.

**FEATURES & BENEFITS**

- Charger shelves come slotted, allowing for optional 6” (152 mm) shelf extension between stands
- Spark-proof, poly-sleeved rollers reduce corrosive build-up and extend product life
- Standard roller height available from 4.5” to 10” (114 mm to 254 mm)

Reference Literature PL-2000 for more information.

### Adjustable Height Battery Stand

The Adjustable Height Battery Stand (BS-OF) provides a safe and durable storage location for forklift batteries. Constructed with heavy-duty steel, the BS-OF is conveniently built to store up to two batteries. The threaded rod feet are positioned on the outside of the frame, allowing the roller height to be adjusted from 4” to 13” (102 mm to 330 mm). The auxiliary backstop (adjustable in six positions or can be removed) provides compartment depths from 18” to 49.5” (457 mm to 1257 mm). The BS-OF is the perfect solution for battery storage maintenance needs.

**FEATURES & BENEFITS**

- Two battery compartments
- Spark-proof, poly-sleeved rollers reduce corrosive build-up and extend product life
- Hitch pin-secured roller axles for ease of maintenance
- Threaded rod outreach feet with adjustable roller height from 4” to 13” (102 mm to 330 mm)
- Seven rollers per compartment
- Adjustable backstop provides compartment depths from 16” to 49.5” (457 mm to 1257 mm)
- “+R” models include battery compartment dividers for additional vertical safety

Reference Literature PL-2000 for more information.

### Battery Service Stands

The BHS Battery Service Stand (BSS) is constructed with heavy-duty steel and provides a convenient place to temporarily store an industrial battery during lift truck service. The BSS is also ideal for storing a Drop-In Roller while not in use. Note: Roller height required when ordering.

**FEATURES & BENEFITS**

- ± 0.5” (± 13 mm) adjustable legs for added convenience
- Spark-proof, poly-sleeved rollers reduce corrosive build-up and extend product life
- Standard roller height available from 4.5” to 10” (114 mm to 254 mm)
- 49” (1016 mm) standard roller bed depth

Reference Literature PL-2000 for more information.

### Hardwood Battery Stations

The BHS Hardwood Battery Station (HBS) is ideal for overhead extraction applications as the battery compartment is equipped with plastic decking (hardwood available upon request) to secure the battery as it is placed on the stand. Note: Drip Pan Kits are available specific to HBS.

**FEATURES & BENEFITS**

- Charger shelf standard on all models
- Recycled, polyethylene decking is acid resistant, nonconductive, and environmentally friendly
- 12” (305 mm) standard height from floor to top of plastic decking
- 0.25” (6 mm) O.D. rollator mounting holes
- Charger shelves come slotted, allowing for optional 6” (152 mm) shelf extension between stands
- Charger anchoring slots for securing most makes of chargers
- Dust rail constructed at tapered angle in center of stand preventing accumulation of debris

Reference Literature PL-2000 for more information.

### Traveling Battery Stands

The BHS Traveling Battery Stand (TBS) is track-mounted with the capacity to hold both a charged battery and a discharged battery during battery change-out. The TBS also provides a location for the discharged battery to recharge. Note: Roller height required when ordering.

**FEATURES & BENEFITS**

- ± 0.5” (± 13 mm) adjustable legs for added convenience
- Spark-proof, poly-sleeved rollers reduce corrosive build-up and extend product life
- Efficient one-person changing system
- Easy-grip push handles
- Available with two (2TBS) or three (3TBS) compartments
- 6” (152 mm) minimum roller height (only 6” height is non-adjustable, anchored to floor)
- 3,600 lb (1633 kg) total capacity

Reference Literature PL-2000 for more information.

### Fork Access Battery Stand

Lift trucks designed without battery roller beds, requiring non-traditional battery exchange with a pallet truck are the perfect application for the Fork Access Battery Stand (BSFA). The BSFA stores a single battery, accepting a variety of battery sizes, and is available in models compatible with either standard 16” or 22” (457 mm or 686 mm) pallet trucks. BSFA models provide an option in charger storage (charger shelf, vertical-mont, or neither).

Reference Literature PL-2000 for more information.

### Drip Pans

BHS Drip Pans help contain spills, protect the floor, and maintain a safe environment in the battery room. Drip Pans are available for System Stands and Hardwood Battery Stations.

BHS Drip Pans help contain spills, protect the floor, and maintain a safe environment in the battery room. Drip Pans are available for System Stands and Hardwood Battery Stations.

BHS1.COM BATTERY HANDLING EQUIPMENT // BATTERY & CHARGER STANDS

---

15
FEATURES & BENEFITS
- Heavy-duty construction for added reliability
- Charger anchoring slots for securing most makes of chargers
- CR-1 Cable Retractor mounting holes
- Single shelf models include fluid corners on the charger shelf for increased product longevity
- Single Shell design features slotted charger shelves, allowing for optional 6” (152 mm) shelf extension between stands as well as SB connector mounting holes
Reference Literature PL-2100 for more information.

Vertical Charger Stands
Vertical Charger Stands (CS-VMP) are available in three models, providing a safe, convenient location for vertical mount chargers.

FEATURES & BENEFITS
- Heavy-duty construction for added reliability
- Designed and built specifically for vertical-mount chargers
- Available mounting for up to three chargers
- Fully adjustable at any level
Reference Literature PL-2100 for more information.

Vertical Charger Mount
The Vertical Charger Mount (VCM) is mounted to a charger stand or racking to accommodate chargers that are typically mounted to walls.

FEATURES & BENEFITS
- Heavy-duty construction for added reliability
- Charger mounting holes for securing most makes of chargers
- Frees up valuable floor space
Reference Literature PL-2100 for more information.

Charger Wall Bracket
The Charger Wall Bracket (CWB) is sturdy, easy-to-install, and an economical solution for mounting battery chargers.

FEATURES & BENEFITS
- Helps prevent charger damage and frees up valuable floor space
- Supports up to 400 lb (181 kg) when mounted on a wall with sufficient bearing strength
- 24.13” (613 mm) deep x 24.13” (613 mm) tall
Reference Literature PL-2100 for more information.

FEATURES & BENEFITS
- Supports up to 400 lb (181 kg) when mounted on a wall with sufficient bearing strength
- 24.13” (613 mm) deep x 24.13” (613 mm) tall
Reference Literature PL-2100 for more information.

Charger Mounting Holes
Charger mounting holes for securing most makes of chargers

Heavy-duty construction for added reliability

Next Available Battery
The BHS NAB-2000 is an advanced, full-adapter monitoring and display system for use with industrial lead-acid battery chargers. The system may be connected to charging systems ranging in size from 10 to 500 chargers.
Reference Literature PL-3700 for more information.

Battery Fleet Management
Simplify your forklift battery fleet management strategy. BHS offers several management tools to provide advanced solutions for fleet inventory and monitoring. These systems help to protect the life of forklift batteries, reduce maintenance costs, save time, and increase productivity, providing a quick return on investment in various applications.

Fleet Tracker™
The BHS Fleet Tracker™ (FLT) is a battery fleet management system utilized by corporate managers, battery room supervisors, and Operator Aboard Battery Extractor operators. Fleet Tracker™ uses the latest technology to provide a detailed look into an organization’s battery inventory to help managers reduce maintenance costs, improve profitability, and increase productivity.
Reference Literature PL-2600 for more information.

Charger Power Modules
Simplify your battery charger installation with BHS Charger Power Modules (PP). Charger Power Modules are designed to be wired directly from the main power distribution panel through a single 480 V / 3 ph connection. Chargers can then be easily connected and disconnected via twist lock plugs (never connect or disconnect plug receptacle if charger is under load). The power modules can be specified for 4, 6, or 8 chargers per panel and can be mounted directly to BHS Battery System Stands and Charger Stands.
Reference Literature PL-4500 for more information.

Next Available Battery
The BHS NAB-2000 is an advanced, full-adapter monitoring and display system for use with industrial lead-acid battery chargers. The system may be connected to charging systems ranging in size from 10 to 500 chargers.
Reference Literature PL-3700 for more information.

Electrical Distribution System
The BHS Electrical Distribution System (EDS) provides flexible power distribution to all 480 V / 3 ph components in an Operator Aboard Battery Extractor System including the Battery Extractor, chargers, and Battery Wash Equipment. The EDS is a stand-mounted, high-density system that is customized using track busway that can be tapped at any location with a simple turn-n-lock connection.

FEATURES & BENEFITS
- Easily accommodates modification or expansion
- Maintenance-free design saves space
- Eliminates power interruptions
- Track Busway consists of four conductors allowing for a maximum capacity of 900 A / 600 V ac or dc
- Circuit Breaker Units tap off power from Track Busway with unique turn-n-lock, “compression fit” connection
- Optional Charger Shutdown connects to the BHS Battery Room Ventilation System (BRVS) or to a Hydrogen Gas Detector (HGD) in order to disable the chargers in the event of excessive hydrogen gas accumulation
- Standard short-circuit capacity for 50 kA
- Circuit breaker units available with standard NEMA L16-20 or L16-30 receptacles
- Aluminum housing provides 100% grounding path, dedicated conductor for ground is also available
Reference Literature PL-3800 for more information.

BATTERIES
Simplify your forklift battery fleet management strategy. BHS offers several management tools to provide advanced solutions for fleet inventory and monitoring. These systems help to protect the life of forklift batteries, reduce maintenance costs, save time, and increase productivity, providing a quick return on investment in various applications.

Battery Room Ventilation System
Lead-acid batteries release hydrogen gas during the charging process. Proper ventilation in the battery room is necessary to ensure potentially dangerous gases are diffused. The BHS Battery Room Ventilation System (BRVS) is designed to detect hydrogen gas at low levels and dissipate the gas to prevent accumulation.

Features & Benefits
- Increases battery room safety by monitoring hydrogen levels
- Improves battery room air quality by exhausting gases produced during battery charge
- Positive airflow shutoff
- Remote firefighter’s shutdown capability (recommended per NEC 501)
- Exhaust damper on each stand ensures even airflow throughout the entire system
- Spiral steel exhaust pipe for added durability (PVC or other material available upon request)
- Piping to the stands, eliminating both the need to attach to rafters and issues caused by high ceilings
- Custom designs available to fit all battery changing requirements
- A complete BRVS aids in compliance with following standards: NEC 480.9 Ventilation of Battery Rooms, NEC 501.125 (8), 501.105 (1-3), NFPA 2 Hydrogen Technology Code

Battery Wash Equipment
BHS Battery Wash Equipment simplifies an essential battery maintenance task while helping to comply with strict environmental regulations. Cleaning forklift batteries regularly can prolong the operational life spans of forklift batteries and extend the productivity of lift truck fleets.

Roller Wash Stations
The BHS Roller Wash Station (RWS) helps keep battery wash water and overspray contained. The RWS comes standard with poly-sleeved rollers for corrosion resistance. The RWS is ideal for use with the BHS Recirculation / Neutralization System (RNS) and is also available in stainless steel.

Features & Benefits
- 11.75” (298 mm) roller height standard, 48” (1219 mm) side panels, and 4,000 lb (1814 kg) load capacity
- Spark-proof, poly-sleeved rollers reduce corrosive build-up and extend product life
- Drain tray is removable for easy cleaning and has 1” (25 mm) NPT coupling
- Designed as stand-alone or for use with Recirculation / Neutralization System (RNS)

Reference Literature PL-2400 for more information.

Hardwood Wash Stations
The BHS Hardwood Wash Station (HWS) helps keep battery wash water and overspray contained. The HWS is ideal for use with the BHS Recirculation / Neutralization System and is also available in stainless steel.

Features & Benefits
- 12” (305 mm) deck height standard, 48” (1219 mm) side panels, and 4,000 lb (1814 kg) load capacity
- Recycled, polyethylene decking is acid resistant, nonconductive, and environmentally friendly
- Drain tray is removable for easy cleaning and has 1” (25 mm) NPT coupling
- Designed as stand-alone or for use with Recirculation / Neutralization System (RNS)
- Custom-built models available to meet specifications

Reference Literature PL-2400 for more information.

Mobile Wash Stations
The BHS Mobile Wash Station (MWS) is a cost effective solution for extending the life of batteries, reducing lift truck electrical problems, and is easily transportable. The MWS is equipped with fork pockets for easily transporting the unit (not to be used while battery is on MWS).

Features & Benefits
MWS-47
- Dual anchor points secure equipment during transport or to permanently secure equipment inside facility
- Friction strips from front to back
- Poly load rollers with stainless steel shafts (three rows with two rollers per row)
- Clear, vinyl drop-in splash curtain
- Full stainless steel construction available.

MWS-72
- Designed for overhead (crane) loading
- Anchor points secure equipment during transport
- Wide, non-skid steps and 15” (381 mm) walkway around wash deck for operator access to battery
- Recycled, polyethylene decking is acid resistant, nonconductive, and environmentally friendly
- Stainless steel drain tray is removable for easy cleaning and drain tray baffles reduce splashing
- Standard 0.75” (19 mm) brass hose connection

Reference Literature PL-2400 for more information.

BHS Battery Wash Cabinets
The BHS Battery Wash Cabinet (BWC) cleans harmful contaminants from a battery’s surface, which extends the life of the battery and reduces electrical problems in lift trucks. The BWC is available in four models and is constructed with stainless steel for durability. The BWC models offer adjustable wash options and water nozzles providing efficient cleaning for various battery types.

Features & Benefits
- Adjustable wash times for efficient cleaning
- Stainless steel construction offers rugged durability
- Low operating cost combined with labor-saving cleaning process saves time and money
- Adjustable legs to accommodate uneven floors (excludes BWC-1-M)
- Adjustable water nozzles to accommodate various battery sizes
- Heavy duty door for industrial applications
- Separate air/water delivery manifolds for optimum efficiency (excludes BWC-1 and BWC-1-M)

Reference Literature PL-2400 for more information.
Recirculation / Neutralization Systems

The BHS Recirculation / Neutralization System (RNS) controls, filters, and recirculates water used for cleaning industrial batteries. The RNS comes standard with a spray wand, 10’ (3 m) hose, and a 12 V dc sump pump with float switch. The BHS Battery Wash Cabinet (BWC), coupled with the RNS, creates a closed loop system that contains and controls the water used for cleaning industrial batteries.

FEATURES & BENEFITS

- Removable front panels for convenient maintenance
- Fewest number of components in the industry lowers operating costs
- Works with manual or automatic BHS Battery Wash Cabinets
- Auto shut-off and indicator light for filter service

Refer to Literature PL-2400 for more information.

Wastewater Recycling Systems

The BHS Wastewater Recycling System (WRS) is an automated, single structure, recycling system, providing on-site wastewater management. The WRS treats, filters and processes industrial wastewater to remove hazardous contaminants and particulates, ensuring that the recycled water is clean.

FEATURES & BENEFITS

- Produces clean, reusable water
- Wash water effluent micron filtered both before & after treatment
- Sludge generated is non-hazardous, non-leachable, and certified landfill friendly for standard trash disposal
- Wash water effluent micron filtered both before & after treatment
- Produces clean, reusable water

Refer to Literature PL-4200 for more information.

Acidsorb

Acidsorb is a granular sorbent that neutralizes and absorbs spilled battery acid (electrolyte) quickly and safely.* Acidsorb provides a visible color change to indicate complete neutralization, is environmentally friendly, and easy to use.

Refer to Literature PL-1300 for more information.

Acidsorb Pillows

The Acidsorb Pillow (ASP) is designed for placement in battery storage stand drip pans or drain trays to absorb and neutralize acidic drips and boil-over from lead acid batteries.* Acidsorb Pillows provide a visible color change to indicate complete neutralization.

Refer to Literature PL-1300 for more information.

Acidsafe Liquid

Acidsafe Liquid is a heavy-duty de-greaser that neutralizes acid residue and boil-over while cleaning battery terminals and cases. The purple liquid changes color to an orange or yellow when in contact with acids. As it neutralizes, the liquid turns back to purple, indicating a safe, neutral pH range.

Refer to Literature PL-1300 for more information.

* Acidsorb is not for use on hydrofluoric acid (HF) or compounds containing HF. Personnel should be trained and qualified to clean up hazardous materials. Dispose of in accordance with regulations of local governing bodies.

Battery Watering Devices

BHS offers a complete line of battery watering devices to match the watering system to the fleet size and requirements. Whether watering trolley batteries by hand or with an automated system, BHS equipment helps staff efficiently deliver water with control and accuracy to help get the most out of your battery life span.

Refer to Literature PL-1300 for more information.
Safety Alarms & Response

BHS Safety Alarms & Response equipment is available to assist in monitoring and protecting the battery room.

Reference Literature PL-4400 for more information.

Eye & Safety Stations

Personnel safety is important when working with industrial batteries. BHS offers a range of products to assist in keeping employees safe and in maintaining compliance with safety regulations.

Reference Literature PL-3100 for more information.

Battery Lifting Devices

BHS offers a variety of durable Battery Lifting Devices that efficiently handle industrial batteries in all vertical extraction applications. Whether using an overhead bridge crane or lift truck, BHS Battery Lifting Devices offer the perfect solution to provide balance and support while handling lead-acid batteries.

Reference Literature PL-2900 for more information.

Cable Management

When battery cables are unsecured, battery rooms can quickly become hazardous. BHS offers a variety of reliable products which carefully secure cables in place to eliminate clutter and prevent damage.

Reference Literature PL-2100 for more information.

Hoist Kits

BHS offers two ton and three ton capacity electric chain hoists with either a ball trolley or motorized trolley. BHS Hoist Kits are designed for use with BHS Gantry Cranes.

Reference Literature PL-3500 for more information.

Equipment Cleaning Kit

The Equipment Cleaning Kit (ECK-4) contains all of the necessary materials to clean and neutralize battery acid build-up and residue from batteries and battery handling equipment. The ECK-4 is easy to transport and allows technicians to clean and neutralize equipment while on the go.

Reference Literature PL-3200 for more information.

Charger Remote Display

The Charger Remote Display (CRD-2000) is designed for use in industrial lead-acid battery charging applications. The CRD-2000 provides a remote display of the progress of a charging cycle, for convenient monitoring when the charger’s front panel is not visible.

Reference Literature PL-3500 for more information.

Signage & Posting Kits

Improve safety, notify personnel of hidden dangers, and prevent accidents in the workplace with the BHS Signage and Posting Kit (SP-1), which contains nine signs for display in the battery room. SP-1 also helps to clearly identify the location of emergency equipment for quick response. This kit is also available in Spanish.
