

## PRESENTING OUR NEWEST INNOVATION

# LEAD ROLLER REPLACEMENT KIT

The BHS Lead Roller Replacement Kit bolts into existing racking systems, improving product performance and enhancing durability to allow for simpler and more stable battery access. It is available as a 17.75" wide single roller (02001571) or a 35" wide double roller (02001409).

### Durable Polyethylene Lead Rollers

BHS's Lead Roller Replacement Kit replaces multiple caster style lead rollers with a full length solid polyethylene roller. The solid poly roller provides added durability and stability at a low cost, with equally low maintenance.

#### Durable Construction

The Lead Roller's brackets are made from formed steel with an abrasion-resistant powder coating for added protection. The use of a solid poly roller without bearings increases stability and durability and minimizes required maintenance.

#### Long Lasting Solution

The increase weight distribution increases the lifespan of your rack rollers, saving you time and money on maintenance/replacement.

#### Easy, Bolt-On Installation

Our Lead Roller bolts onto your existing racking systems in minutes to save you time and money. Pre-drilled mounting holes are compatible with little to no modification.

#### Added Stability

BHS's roller spans the full width of the rack compartment, better distributing the batteries weight and providing added safety for your workers.

## LOW COST, LOW MAINTENANCE

Replace easy to break casters with a full length solid poly roller to distribute weight evenly and minimize maintenance
